Referencing: Proposal to Provide Infiltration Rate Testing and  
Seasonal High Groundwater Determinations  
Fifty Oaks – St. Simons Island, GA

Dear Mr. Ussery:

In accordance with your request, we have prepared the following cost estimate to perform hydraulic conductivity testing and seasonal high groundwater determinations at the above referenced site. Per Kern & Co., Inc. request (see attached sketch), infiltration rate testing will be performed at 4 locations and the seasonal high groundwater table will be determined at two locations. The seasonal high groundwater table will be determined by performing soil mottling services on soil samples collected from continuously sampled auger borings. Infiltration rate testing will be performed utilizing an Aardvark Permeameter. As requested, hydraulic conductivity testing will be performed at a depth approximating 3 feet and 5 feet below the ground surface or 12 inches above the groundwater table if groundwater resides within a foot of the planned test elevation. Whitaker will perform the above scope of work, including the reporting of results for a lump sum fee of \$2,400.00.

If the above proposal is acceptable, please sign below indicating your acceptance of this proposal and your authorization for Whitaker Laboratory to proceed with work. Once signed please fax to us at (912) 233-5061.
